

New XTAR MOTO 4T GP 10W40

We are pleased to inform you that Cepsa has launched the new lubricant **XTAR MOTO 4T G 10W40 (51437)**.

WHAT IS XTAR MOTO 4T GP 10W40?

It is a **100% synthetic super multi-grade lubricant**, formulated with Premium **EfficientLUB®** technology, required by 4-stroke multi-cylinder and multi-valve cycles in any type of driving.

WHO IS XTAR MOTO 4T GP 10W40 INTENDED FOR?

It is specifically designed for the joint lubrication of the engine, gearbox and wet clutch, and is also valid for motorcycles with a dry clutch.

It is recommended in very severe conditions of low and high temperatures, as well as for urban traffic with frequent starts and stops.

Suitable for any motorcycle whose manual specifies a lubricant with SAE 10W-40 viscosity and JASO MA2 and API SN quality levels. It also covers applications requiring JASO MA or earlier API versions (SM, SL and later).

WHAT ARE THE BENEFITS OF XTAR MOTO 4T GP 10W40?

Due to its **100% synthetic base** and high viscosity index, it provides superior lubricity at all temperatures, especially at a very low temperature start-up, as well as excellent pumpability throughout the operating period.

In addition, Premium **EfficientLUB®** technology offers performance that goes beyond JASO requirements, with benefits that motorcycle users themselves will experience: a **smooth ride** with effective shift times, **optimal power transfer** (minimizing power losses) and **increased engine and oil life**, thanks to unmatched cleanliness properties.

WHAT ELSE SHOULD YOU KNOW?

This product is available in the following format:

- 514374191 XTAR MOTO 4T GP 10W40 C12x1L
